Trey,

Please call me at your earliest convenience. I would like to update you regarding an issue at the Granada Manufacturing Facility. EPA recently became aware that results from indoor air sampling done at the facility indicate elevated TCE levels in the Facility. All of the sample results exceeded EPA screening levels for TCE and several exceed action levels. EPA has directed the current operator of the facility, ICE Industries, to notify the employees immediately. It is my understanding that those notifications began last night.

Below is the recommended information that EPA provided to ICE Industries to make employee notifications of elevated TCE levels at the Facility. In addition to the Facility's employee notification, the EPA is taking its own steps to notify the general public and other local stakeholders of the current conditions at the Facility, including posting available information and data on the EPA's Grenada website ([www.epa.gov/grenadacleanup](http://www.epa.gov/grenadacleanup)) and disseminating a fact sheet to local community members and related officials. Please note that the Fact Sheet is undergoing final review and I hope to have it to you later today.

The EPA has offered to assist with future communication and outreach efforts, if requested. As always I'm available if you have any questions. I will be away from the office most of the day but can be reached via email or my cell phone at 404-938-9800. Please let me know that you have received this information. I also intend to make notifications to the local council members and Congressman Thompson's office.

Respectfully,

Dionne

**Government Affairs Specialist**  
**EPA Region 4**

### Recommended Information:

- Air samples were collected at the Facility during the week of October 24, 2016.
- The EPA received the validated data on January 3, 2017, showing elevated levels of trichloroethene (TCE). TCE is a non-flammable, colorless liquid used as a solvent for cleaning metal parts, among

other uses. It is a common groundwater contaminant and can evaporate, so can commonly be found as a vapor in air.

- Indoor air was sampled at 11 locations in both the administrative and manufacturing areas of the Facility. TCE was found to be above indoor air screening levels for industrial settings in all occupied indoor areas. Air from beneath the manufacturing building (known as “sub-slab”) and from the basement were also sampled. All but one of the sub-slab samples showed TCE above screening levels.
  - Screening levels are values used by the EPA to help determine if a contaminant should be considered for further evaluation.
- In five samples from the manufacturing areas, TCE was found to be above the indoor air action level for industrial settings for sensitive populations, which includes women of childbearing age (due to potential developmental impacts to a developing fetus in the first trimester of pregnancy). In the area near the former chrome plating line, TCE was found to be above the action level for industrial settings for non-sensitive populations (i.e., the general population).
  - Action levels are values used by the EPA to identify where an action may be necessary to protect public health and/or the environment.
- These results indicate that TCE may be entering the Facility in the form of a gas from contaminated groundwater and soil beneath the building, a process known as “vapor intrusion.” Groundwater sampling conducted over the past three decades show that there is contaminated groundwater underneath the Facility property.
- A second round of indoor air and sub-slab sampling is planned for the week of January 16, 2017.
- To address indoor air conditions at the Facility in the short term, the EPA requested on January 5, 2017, that the Facility take immediate steps to reduce TCE exposure, including increasing air ventilation within the Facility, adjusting HVAC systems to increase air circulation, real-time monitoring to measure air quality improvements, and any other measures necessary to mitigate current conditions.
- In the long term, the EPA is working with the Mississippi Department of Environmental Quality (MDEQ) and the Facility (including all relevant parties) to identify long-term measures to reduce and eliminate the current indoor air exceedances within the Facility.
- The health effects of TCE depend upon the pathway, amount, and time length of exposure to the chemical. Long-term exposure to TCE vapors could pose potential health risks.
- If you believe you have been exposed to TCE related to the Facility, you may want to consult your doctor. The Agency for Toxic Substances and Disease Registry (ATSDR) has TCE exposure training materials and information available for doctors in Mississippi upon request. The materials explain how you can be exposed to TCE, and how it affects your health. For more information, your doctors can contact:
  - Mississippi Poison Control Center: (601) 984-5577 or (800) 222-1222
  - Bruce Brackin, MSDH: (601) 576-7725
  - Leann Bing, ATSDR: (404) 562-1784
- More information about the EPA’s ongoing work in and around the Facility is available online at: [www.epa.gov/grenadacleanup](http://www.epa.gov/grenadacleanup).

Mike,

Based on a quick review, I would suggest adding an agenda (and list of speakers?) and rearranging the slides as we discussed on the call. There are also several acronyms that need to be spelled out and we should identify the contacts at each agency.

I have a another call in to Trey but haven't heard back yet.

Will keep you posted.

Thanks

Dionne

**Subject:** Re: Final Grenada Presentation

Thanks Mike. Also, I finally heard back from Trey. We are a go for next week. He's going to send me copy of the meeting invite which has been distributed to the neighborhood. He's also sending it to the plant and inviting them to speak on Tuesday but he thinks they will decline as most communications are coming from the corporate office. Also he did clarify that we will speak briefly at the City Council mtg on Monday and the room holds a total of 100. This will be no more than a 5 minute basic over view of what will happen on Tuesday. I'm happy to do this. Also, this is a called meeting and will be open to the public but we can defer questions and discussions till Tuesday. Last, he has a call in to the attorneys to request what he's calling a "cease fire" for next week.

Let me know if you have any questions.

Thanks

Dionne

All,

I spoke with Trey (the new City Manager for Grenada) and after having discussions with the local Councilman for the area they are now requesting that we do a very short briefing/overview of the issue for the City Council (5-10 minutes) on the evening of the 30th, and would like us to participate in a community briefing to be hosted by the City on the 31<sup>st</sup>. I told him I would get in touch with the program to determine if this was something we could accommodate. I also expressed concerns with the forum and he assured me that he wanted to make sure the meeting went smoothly and that it would be hosted and controlled by the City.

Please let me know your thoughts or perhaps it would be best to meet.

Respectfully,

Dionne

Another Grenada story courtesy of Ken Mitchell:

Miss. manufacturing workers exposed to toxins — EPA. Hundreds of workers in a Grenada, Miss., manufacturing facility are likely inhaling toxic air during the workday, according to a study released by U.S. EPA. Cancer-causing vapor flows inside the Grenada Stamping facility at rates higher than the federal action level, which is the highest threshold created by the agency.

**Subject:** RE: Grenada media coverage

All,

I spoke with Trey (the new City Manager for Grenada) and after having discussions with the local Councilman for the area they are now requesting that we do a very short briefing/overview of the issue for the City Council (5-10 minutes) on the evening of the 30th, and would like us to participate in a community briefing to be hosted by the City on the 31<sup>st</sup>. I told him I would get in touch with the program to determine if this was something we could accommodate. I also expressed concerns with the forum and he assured me that he wanted to make sure the meeting went smoothly and that it would be hosted and controlled by the City.

Please let me know your thoughts or perhaps it would be best to meet.

Respectfully,

Dionne

Another Grenada story courtesy of Ken Mitchell:

Miss. manufacturing workers exposed to toxins — EPA. Hundreds of workers in a Grenada, Miss., manufacturing facility are likely inhaling toxic air during the workday, according to a study released by U.S. EPA. Cancer-causing vapor flows inside the Grenada Stamping facility at rates higher than the federal action level, which is the highest threshold created by the agency.

All,

This week, I've been contacted by Reggie Ross, reporter at Grenada Star, and Jacqueline Kalil, morning anchor and reporter at The Delta News. I've provided both of them our desk statement, fact sheet and link to website. Attached is the Grenada Star piece published yesterday—very factual, accurate piece. I'll keep an eye out for the television coverage and update the group.

Good morning,

Can anyone share more details re. the requested community briefing next week? Has a time/location been determined? What is the expected audience size, who will moderate, speak on behalf of EPA, etc.? Do we know how the City plan to advertise it (would be helpful to see any announcement in advance).

Thank you,

**Subject:** RE: Grenada media coverage

All,

I spoke with Trey (the new City Manager for Grenada) and after having discussions with the local Councilman for the area they are now requesting that we do a very short briefing/overview of the issue for the City Council (5-10 minutes) on the evening of the 30th, and would like us to participate in a community briefing to be hosted by the City on the 31<sup>st</sup>. I told him I would get in touch with the program to determine if this was something we could accommodate. I also expressed concerns with the forum and he assured me that he wanted to make sure the meeting went smoothly and that it would be hosted and controlled by the City.

Please let me know your thoughts or perhaps it would be best to meet.

Respectfully,

Dionne

**Subject:** RE: Grenada media coverage

Another Grenada story courtesy of Ken Mitchell:

Miss. manufacturing workers exposed to toxins — EPA. Hundreds of workers in a Grenada, Miss., manufacturing facility are likely inhaling toxic air during the workday, according to a study released by U.S. EPA. Cancer-causing vapor flows inside the Grenada Stamping facility at rates higher than the federal action level, which is the highest threshold created by the agency.

**Subject:** RE: Grenada media coverage

All,

This week, I've been contacted by Reggie Ross, reporter at Grenada Star, and Jacqueline Kalil, morning anchor and reporter at The Delta News. I've provided both of them our desk statement, fact sheet and link to website. Attached is the Grenada Star piece published yesterday—very factual, accurate piece. I'll keep an eye out for the television coverage and update the group.

> Thanks Mike. Also, I finally heard back from Trey. We are a go for next week. He's going to send me copy of the meeting invite which has been distributed to the neighborhood. He's also sending it to the plant and inviting them to speak on Tuesday but he thinks they will decline as most communications are coming from the corporate office. Also he did clarify that we will speak briefly at the City Council mtg on Monday and the room holds a total of 100. This will be no more than a 5 minute basic over view of what will happen on Tuesday. I'm happy to do this. Also, this is a called meeting and will be open to the public but we can defer questions and discussions till Tuesday. Last, he has a call in to the attorneys to request what he's calling a "cease fire" for next week.

All,

The reporters deadline is today at 4 p.m. Please review and provide any edits to me as soon as possible. I plan to respond to the reporter between 3:45 and 4 p.m. I will also inform her that no one is available to speak with her today, but we will provide someone to speak with her early next week.

**Subject:** ACTION - Desk statement draft

Below is the draft desk statement proposed in response to Anna's inquiry below. Please copy Larry on any edits as I will be leaving the office momentarily. Thank you!

Hey Davina,

Anna Wolfe with The Clarion-Ledger in Jackson, Miss., here. I'd like to speak with someone from EPA about the Grenada Manufacturing site and the recent updates. I know EPA has tested the site itself and I'm wondering what the agency is doing to protect the workers there. Rather than send emailed questions, I'd like to speak with someone, particularly someone working on the site, considering the seriousness of the matter.

#### **DESK STATEMENT**

EPA continues to assess potential impacts to human health and the environment resulting from contamination at and surrounding the Grenada Manufacturing, LLC facility (Facility, commonly known as Grenada Stamping and currently operated by Ice Industries). On January 3, EPA received sampling results showing elevated levels of trichloroethene (TCE) in the Facility's indoor air and as well as areas beneath the concrete foundation. EPA and the Mississippi Department of Environmental Quality (MDEQ) directed Ice Industries to notify workers of the elevated TCE concentrations and implement immediate actions at the Facility to reduce worker exposure. Specifically, In the near-term, EPA has directed Ice Industries to increase ventilation inside the Facility to help reduce workers' TCE exposure. This may include such things as opening windows, doors, adjusting the HVAC system to circulate air flow, or installing filters.

The results indicate that TCE may be entering the Facility in the form of a gas from contaminated groundwater and soil beneath the building, a process known as "vapor intrusion." Groundwater sampling conducted over the past three decades show that there is contaminated groundwater underneath the Facility property. EPA will oversee a second round of air sampling at the Facility during the week of January 16, 2017. EPA continues to work with the MDEQ and the Facility to identify long-term measures to reduce and eventually eliminate TCE exposure inside the Facility.

Good morning all. Trey is meeting with the councilman today and hopes to have a confirmed date for a visit/briefing for the City but it's looking like Jan 31st is what they're shooting for. I'll let you know as soon as I hear back.

Thanks  
Dionne

**Subject:** Grenada Meeting(s)

Good afternoon Dionne

I just wanted to follow-up on a few things with you about the meeting. I am hoping that you can have a follow-up conversation with Trey on a few things, so we can get further clarification. If you need me, I can be available to be on a call with you to call him.

- 1) Can the meeting be advertised such that the community knows that it is a meeting with EPA to speak primarily about Grenada? (Therefore, we hope to eliminate the need to address Airport Circle or Koppers. We are not opposed to answering questions about either, but we want to make sure we can address our intended audience.)
- 2) Can the meeting be advertised with a start and end time? Although, EPA can be there to answer every question asked – we would still like the public to anticipate an ending time.
- 3) EPA would like to share the flyer prepared by the City with our contacts at Grenada Stamping to ensure the workers which is one of our targeted audiences have the notice such that they can attend the meeting. We can also provide a contact at Grenada Stamping so the information can be shared with the plant directly.

An additional question was about the 80 sitting/100 standing. Is that 180 total or 80 sitting with room for 20 more standing? We need to know so that we have enough materials to handout. Also, can we have a table set-up for our materials?

THANKS!
